DETAILED ACTION

Allowable Subject Matter

1. Claims 1 – 18 are allowed.
2. The following is an examiner's statement of reasons for allowance:
 - a. With regard to claims 1 – 14, the prior art of record does not disclose or suggest, either singularly or in combination at least the claim limitations of "a packaging layer on the organic electro-luminescent device, wherein the packaging layer comprises first and second inorganic layers having opposite stresses; and a first organic layer between the first and second inorganic layers."
 - b. With regard to claims 15 – 17, the prior art of record does not disclose or suggest, either singularly or in combination at least the claim limitations of "a first inorganic layer on the first organic layer; a second organic layer formed of one or more layers on the first inorganic layer; a second inorganic layer on the second organic layer and formed of a same material as the first inorganic layer, wherein the first and second inorganic layers have opposite stresses;".

Art Unit: 2815

c. With regard to claim 18, the prior art of record does not disclose or suggest, either singularly or in combination at least the claim limitations of “forming a first inorganic layer on the first organic layer; forming a second organic layer formed of one or more layers on the first inorganic layer; forming a second inorganic layer on the second organic layer, the second inorganic layer formed of a same material as the first inorganic layer, wherein the first and second inorganic layers have opposite stresses;”.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Yamazaki et al., Lee, Saruwatari, and Fujiki et al. all teach organic and inorganic layers laminated together exhibiting either compression or tensile stresses.
